

## V-TYPE FILTERS (3V)

**Type:** higher efficiency compact filter.

**Applications:** ventilation and air conditioning systems:

- hospitals and laboratories,
- office buildings,
- hotels,
- shopping centers,
- airports,
- libraries and museums,
- sports arenas.

V-type filters are higher efficiency filters, which hold the smallest particles – bacteria, fine dust and pollen. Due to the large surface area, these filters have a long service life and lower air pressure drop compared with bag filters and compact filters. This leads to extremely low energy consumption.

**Housing:** high-quality plastic.

**Filter media:** high-quality polypropylene and polyester.

**Hermetic material:** polyester.

**Maximum permitted temperature/relative humidity:** 70°C/100%.
